Comp. Anal. of Phys. Sys.

HW5

Ask the user to enter two numbers (x and y) in a Tkinter window. These numbers are two sides of a right triangle other than the hypotenuse. Use these numbers to find the hypotenuse of the triangle and print the result on the screen in a Tkinter window (in the same window or in a new one). (You can use any widget you want.)

Upload a single PDF file containing your code and a screenshot of the output as your homework.
